PYTHON FOR COMPLETE BEGINNERS
3-Month Curriculum
2 sessions/week, 2 hours per session (24 sessions total)

==
MONTH 1: GETTING COMFORTABLE (Sessions 1-8)
==

Weeks 1-2: First Steps
- What is programming, installing Python, using an editor (VS Code/Thonny)
- print(), variables, basic data types (int, float, str, bool)
- Basic math operations, input() from user
- Strings: concatenation, formatting, basic methods

Weeks 3-4: Making Decisions & Repeating
- if/elif/else statements
- Comparison and logical operators
- while loops
- for loops, range()
- Practice: simple number guessing game, basic calculator

==
MONTH 2: ORGANIZING CODE & DATA (Sessions 9-16)
==

Weeks 5-6: Collections
- Lists: creating, indexing, slicing, common methods
- Tuples
- Dictionaries: keys, values, basic operations
- Nested loops with lists/dicts
- Practice: to-do list app, grade tracker

Weeks 7-8: Functions
- Writing functions, parameters, return values
- Why functions matter (reusability, organization)
- Scope (local vs global) - kept simple
- Practice: build a small set of utility functions (temperature converter, simple quiz app)

==
MONTH 3: BRINGING IT TOGETHER (Sessions 17-24)
==

Weeks 9-10: Errors & Files
- try/except basics
- Reading and writing text files
- Working with CSV files (very basic)
- Practice: save/load data from a file (simple contact book)

Weeks 11-12: Final Project
- Intro to basic OOP concepts (just enough: what's a class, simple example)
- Project planning session
- Guided project building (e.g., contact book, expense tracker, or quiz app) across 2-3 sessions
- Final session: presentations, Q&A, "what to learn next" roadmap

==
PACING NOTES
==
- Each session should be roughly half review/lecture, half hands-on coding
- Buffer time is baked into the pacing - nothing moves too fast
- No advanced topics (no APIs, no async, no frameworks) - keeps focus on fundamentals
